System Shown: Vertical mounting with the load beneath the cylinder

Cylinders functioning is regulated by a 5/3 valve, center open on the central port and supplied by exhaust ports.

Cylinders Mounting
NOTE: Avoid repeated overlapping conditions when programming the Rod Lock into your system. (i.e.: forced motion during engagement or disengagement of the Rod Lock.) Shaft and/or collar wear will result. Design the control system to use the Rod Lock in static conditions.

One-directional flow reducers can be used to control the speed of the cylinder rod. To ensure fast braking of the rod, a quick exhaust valve can be installed on or near the rod lock.

A normally closed (NC) solenoid valve directs air supply to the rod lock, keeping it disengaged until the electrical signal is interrupted.

Vertical Mounting: The force on the piston must not exceed its locking capacity when it is combined with the force of the load. Use of a 5/3 valve provides a braking effect and maintains accurate rod positioning. Stopping precision is determined by the rate of speed of the rod and loads in motion.

Horizontal Mounting: Pressure is maintained on both sides of the cylinder piston, keeping it balanced and preventing rod displacement upon release. Use exhaust ports 3 and 5 (see below).

Features:
- No Rod Displacement on Engagement
- Large Clamping Surface
- Fast Response Time
- Extremely Low Backlash
- Spring-Engaged Units

Benefits:
- Maintains Accurate Positioning
- Consistent Clamping Force
- Suitable for Wash-Down Areas
- High Cycle Rates, Accuracy
- Precision Holding
- Holds Load During Power/Pressure Loss
- Long, Maintenance-Free Life
- Compact Unit, Easy Integration
- Broad Application

ST3RL-MA05
**Precision Operation Maintains Accurate Positioning**

The ST3RL series of Rod Locks guarantees accurate positioning and provides precision holding while other operations are performed. The Rod Lock engages without causing any rod displacement, and also features extremely low backlash during operation, making them ideal for precision applications.

**Large Clamping Surface Ensures Consistent Performance**

The ST3RL line is designed with a large clamping surface that provides uniform force to the rod contact area on every engagement. The clamping mechanism utilizes numerous ball bearings to reduce friction and has close to a 3,000,000 cycle life.

**Spring-engaged Units Engage in Power-off Situations**

Starcyl's Cylinder Rod Locks are spring-engaged, so they operate even in power-off situations to promote safety for operators and machinery. The fast response time of these spring-engaged products also increases positioning accuracy.

**Sealed to Withstand Harsh Environments**

Every ST3RL Rod Lock is sealed to protect internal components. These seals are designed to withstand even harsh wash-down environments and are IP67 rated (exceed NEMA 4X rating).

---

### CYLINDER ROD LOCK BASIC DIMENSIONS

---

### EXAMPLE: ST3RL F1-1.5X4-#2 is a 1.5" bore, 4" stroke Front Flange Mount, 5/8” rod, 7/16-20 Male rod end, Both ends cushion.

(STAR 3 - NFPA air cylinders series catalog for more details)

---

### OTHER MOUNTINGS AVAILABLE (SEE STAR3 CATALOG)

---

**OVERSIZE RODS ARE ALSO AVAILABLE AS FACTORY REQUEST**

---

**ROD LOCK CUTAWAY**

---

**Air Chamber**

**Air Inlet**

**Spring**

**O-Ring Seal: Buna-N**

**Ball Bearings**

**Piston and Outer Collar**

**In stainless steel**

**Breather**

**Steel Clamping Collar**

**Anodized Aluminum Housing**

**Lip Seal: Buna-N**

**High Performance Guide Bushing**
